

Student Fee Management System

- ▶ A C++ program using Linked List
- ▶ To manage student fee records

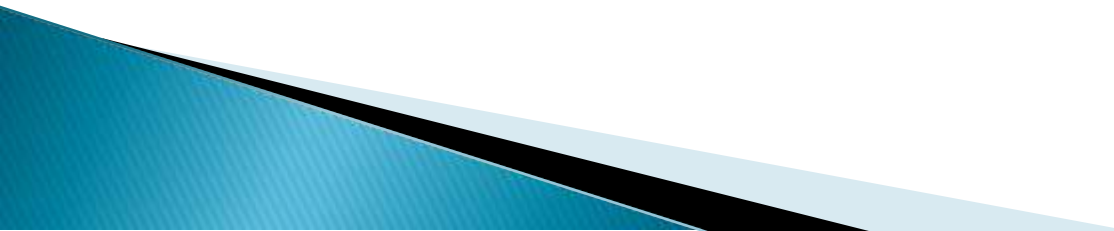

Introduction

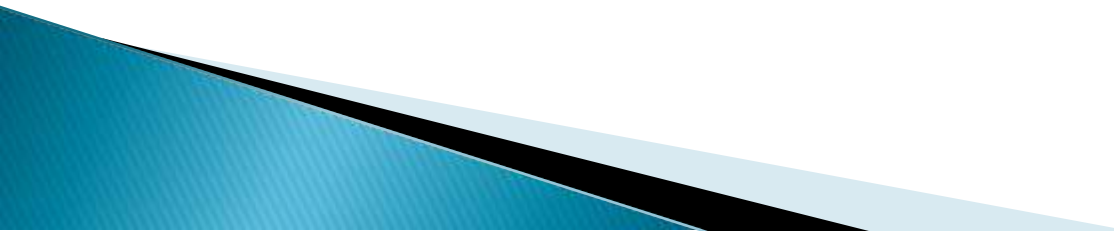

- ▶ This program manages student fee details using a singly linked list.
- ▶ It allows dynamic storage and efficient operations.

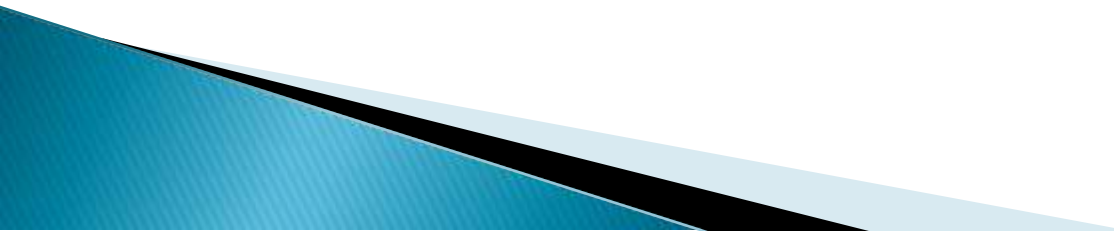

Objectives

- ▶ • Store student data dynamically
 - ▶ • Calculate fee details
 - ▶ • Search and display records
 - ▶ • Provide menu-driven interface
- 

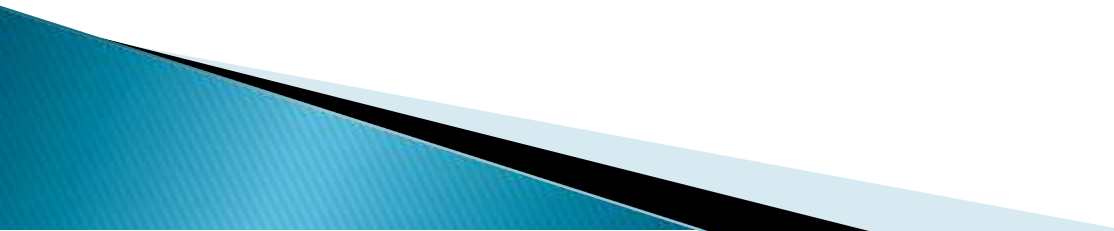

Data Structure Used

- ▶ Singly Linked List
 - ▶ Each node contains:
 - ▶ • Roll Number
 - ▶ • Category
 - ▶ • Fee details
 - ▶ • Pointer to next node
- 

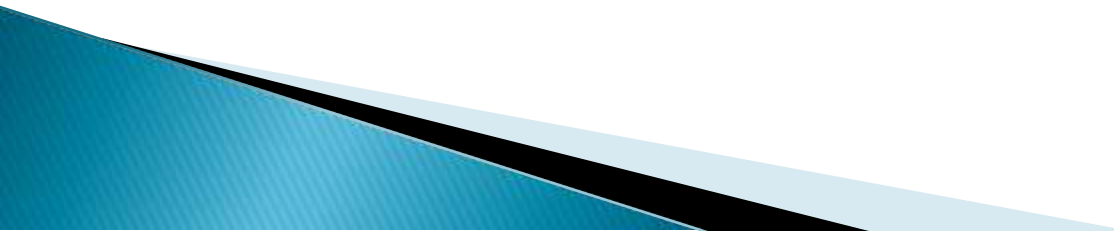

Student Categories

- ▶ Based on Roll Number:
 - ▶ • PMSR
 - ▶ • PMS
 - ▶ • Management
 - ▶ • Non-PMS
- 

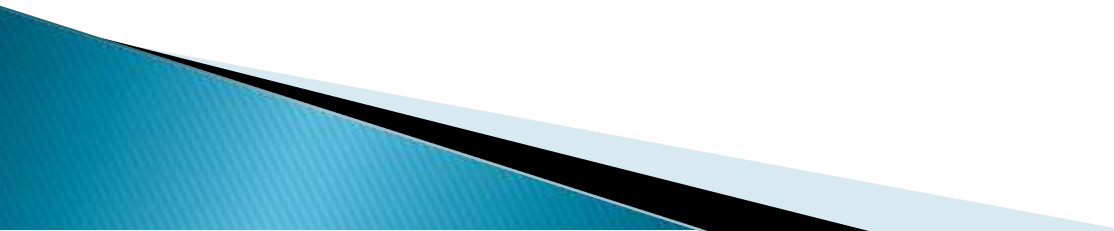

Fee Structure

- ▶ • PMS → 50000
 - ▶ • PMSR → 30000
 - ▶ • Management → 80000
 - ▶ • Non-PMS → 60000
- 

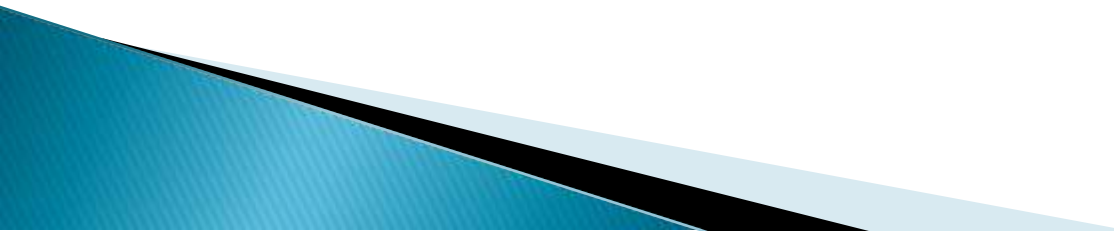

Operations

- ▶ 1. Add Student
 - ▶ 2. Search Student
 - ▶ 3. Display All
 - ▶ 4. Exit
- 

Add Student

- ▶ • Input details
 - ▶ • Determine category
 - ▶ • Assign base fee
 - ▶ • Insert node at end
- 

Search Student

- ▶ • Traverse list
 - ▶ • Match roll number
 - ▶ • Calculate total & due
 - ▶ • Display details
- 

Display All

- ▶ • Traverse list
- ▶ • Display all roll numbers
- ▶ • Show list structure

Methodology

- ▶ Menu-driven program using linked list.
- ▶ Supports insertion, searching, and display operations.

Advantages

- ▶ • Dynamic memory usage
- ▶ • Efficient insertion
- ▶ • Simple implementation

Conclusion

- ▶ The system efficiently manages student fee records using linked list concepts.
